

BLUETOOTH CONNECTION TO THE AUDIO SYSTEM OF KTM

KTM: 125 Duke, 390 Duke

N-Com: B901 system, firmware version 1.4

The N-Com B901 is compatible with the new Bluetooth audio system installed on the KTM. After having paired up and connected the N-Com system to your motorbike, you will be able to hear all audio signals coming from the KTM in the helmet.

INDIVIDUAL USE

Make sure that:

- the motorbike is stopped;
- the KTM MY RIDE system is active;
- the Bluetooth on the KTM is active.

1. On the KTM, press the key "SET".
2. Press the keys "UP" or "DOWN" to select the item KTM MY RIDE, then press the key "SET" to confirm the choice.
3. Press the keys "UP" or "DOWN" to select the item "PAIRING", then press the key "SET" to confirm the choice.
4. Press the keys "UP" or "DOWN" to select the item "HEADSET", then press the key "SET" to confirm the choice.
5. Press the keys "UP" or "DOWN" to select the item "PAIRING", then press the key "SET" to confirm the choice.
6. Bring the N-Com system to the "Configuration" menu and select the item "Mobile pairing" (please refer to the N-Com user manual).
7. The N-Com device is detected after a few seconds. Select it from the list by pressing the key "SET". Press the key "SET" once again to confirm the choice.
8. The systems are now paired up. From now on, all audio coming from the motorbike is transmitted to the helmet.

The pairing up is saved by both the helmet and the motorbike, and it is not lost upon turning them off. That is, after turning on the KTM and the N-Com system, the two will connect automatically.

MOBILE PHONE CONNECTION

To use your mobile phone while riding, it is advisable to pair it up directly to the audio system of the motorbike (please refer to the motorbike user manual). By doing so, the calls will be transmitted to the helmet. Incoming calls will be answered using the KTM controls.

ADJUSTING THE VOLUME

By updating the N-Com system to the last available Firmware version, you can adjust the volume of the audio coming from the bike directly from the controller located on the handlebars.

While riding, you will be able to turn up or down the volume of the multimedia audio transmitted in the helmet without having to take your hands off the handlebars.

N.B.: Adjusting the volume DOES NOT affect the audio of phone calls.

USING THE SYSTEM AS A PAIR

The KTM MY RIDE audio system installed on models 125 DUKE and 390 DUKE does not allow a second helmet to be connected directly to the motorbike.

Therefore, in order to keep the intercom connection active via Bluetooth with one's passenger, it is recommended to use the intercom connection as indicated in the N-Com system manual.

N.B.: During intercom connection between the two helmets, **it is not** possible to hear the audio coming from the motorbike.

N.B.: If the mobile phone is connected to the audio system of the motorbike, it will NOT be possible to use it during connection with the passenger's helmet.
